

I am an Over-The-Road truck driver and XM radio, especially the traffic and weather channels, is the best thing invented in the past 10 years. By listening to "Up to the minute traffic reports" I can preplan my route to miss major backups instead of being in the traffic jam before the regular AM/FM channels can tell me about them. I now have the ability to leave my home and know in advance what I will be running into. Also with the "Instant weather reports", I know the roads I can or cannot travel. In my opinion XM Traffic and Weather channels are the best thing going, and I respectfully request that petition NAB 04-160 be rejected.
